

KOBE J. CORPUZ

Full-Stack Developer

ABOUT ME

I'm Kobe J. Corpuz, a developer with over 5 years of experience specializing in web and mobile applications using React, Vue, Django, PostgreSQL, and Supabase. Experienced in building academic systems, financial tools, and automation-focused platforms with strong problem-solving and UI/UX skills.

EDUCATION

2019 - 2021

University of Immaculate Concepcion - Annex

Informations and Communications Technology

2021 - 2026

University of Immaculate Concepcion - Father Selga Campus

Information Technology Major in Learning Technology

WORK EXPERIENCE

Remote | 2024-2025

Freelance Software Developer

Developed custom academic and business software solutions for freelance clients, including system design, frontend/backend development, debugging, and database management. Collaborated with clients to improve workflows and optimize system usability.

ALTOS Innovations Corp. | Jan 13, 2026 - March 25, 2026

Software Developer Intern

Developing a cross-platform mobile application for the company's main product using React Native. Implementing efficient local data storage solutions to enhance app performance and user experience. Collaborating with the backend team to integrate MongoDB databases, ensuring seamless data flow and synchronization within the application.

PROJECTS

Togetha

Togetha is a centralized productivity tool that includes both backend and frontend components, intended to help organize tasks or workflows in one place. The repository is structured with separate folders for the backend (server) and frontend parts of the application and uses Python for most of its code.

Tech Stack: Django, React-Native, Ollama, Railway

University Violation Tracker

"UVT" (University Violation Tracker) is a system designed to streamline the process of reporting and managing student violations of school rules and regulations. Additionally, it serves the purpose of reducing paper usage by storing relevant files and information electronically.

Tech Stack: Vue.js, Supabase, PostgreSQL, Postman
